Secure Web Access to
Control Room Data

Access Utility Control Room Data Securely on a Web Browser

Having timely access to network control systems is essential for the operators, managers, and executives at your utility - even when they're away from the office. Their ability to monitor the network is limited if they can only login to the network from workstations in the control room.

SurvalentONE WebSurv provides authorized users with read-only access to SCADA data. Based on the maps created in Survalent's SmartVU graphical user interface (GUI), users can review near real-time data and generate customized reports outside of the SCADA network. WebSurv also allows you to see alarms, operator summaries, and information from Survalent Explorer that can assist with setup and troubleshooting.

With SurvalentONE WebSurv, operators, managers and field crews get the information they need, when they need it, so they can make informed decisions and respond quickly to operational challenges.

Monitor Your Network Remotely

Compatible with all major web browsers, SurvalentONE WebSurv displays control room information on just about any computer with an Internet connection.

Instead of requiring an operator to come back to the control room to advise on a problem, operators can simply ask their colleague to login to the network via WebSurv, review the situation, and suggest an immediate course of action.

Likewise, managers can easily monitor the health of the network from an offsite computer at any time.

Increase Productivity

Viewing network information through SurvalentONE WebSurv is the same as getting the data directly from a workstation in the control room - without the need to travel to reach a network-enabled terminal.

For some corporate personnel, having direct network access eliminates the need to make information requests to busy operators, which takes time and diverts them away from performing their core duties.

The ability to monitor network operations remotely via a web browser saves everyone time, enabling your team to get more done each day.

Benefits

- Ability to view SCADA data anywhere, anytime
- Read-only, near real-time access to SCADA data via a web browser
- Heightened system security due to read-only access
- Faster response time to network events
- Increased collaboration and information sharing
- Timely, informed decision-making
- Higher productivity
- Improved reporting of SCADA data
- Ability to create and view custom reports on a per-user basis
- Administrator tools that allow permissions to be set on a per-user basis

Key Features

- Secure login access
- Uses SurvalentONE Replicator to reproduce the SCADA database on a separate server, thereby off-loading the SCADA host(s) and limiting external contact to the SCADA system
- Dynamic SmartVU graphics rendered by HTML5
- User-defined refresh rate for dynamic data, alarms, and graphics
- Supports panning, zooming, dynamic line coloring, and other dynamic SmartVU features
- User-friendly interface to view configuration details
- Easily view SmartVU graphics, substation single line diagram, or tabular data

SurvalentONE WebSurv provides SCADA information securely to users.

Control your critical network operations with confidence

With Survalent, you can control your critical network operations with confidence. We're the most trusted provider of advanced distribution management systems (ADMS) for electric, water/wastewater, gas, and transit utilities across the globe.

Over 600 utilities in 30 countries rely on the SurvalentONE platform to effectively operate, monitor, analyze, restore, and optimize operations. By supporting critical utility operations with a fully integrated solution, our customers have significantly improved operational efficiencies, customer satisfaction and network reliability.

Our unwavering commitment to excellence and to our customers has been the key to our success for over 50 years.

“ We chose Survalent because of familiarity, ease-of-use and their reputation for excellent customer service. We have not been disappointed.”
